PROFESSIONAL SUMMARY

Full Stack Developer with 4+ years of experience in the financial sector, specializing in backend engineering, scalable APIs, and high-criticality systems. Experienced in Node.js, Go, TypeScript, PostgreSQL, Redis, AWS, and event-driven architectures, with hands-on experience designing services, integrations, and distributed systems.

Proven track record modernizing legacy financial platforms, performing large-scale system rewrites and data migrations, and improving system performance by over 200%. Experienced in building reliable, high-availability systems where data integrity, correctness, performance, and operational reliability are critical.

Strong full-stack background with React and TypeScript, combined with a backend-oriented approach to architecture, APIs, data layers, background processing, and automation of complex workflows.

TECHNICAL SKILLS

Backend: Node.js, TypeScript, Go, Express, NestJS, Hono, REST APIs, Webhooks, Background Processing

Frontend: TypeScript, React, Next.js, Component-Based UI Development

Databases & Data: PostgreSQL, MySQL, Redis, MongoDB, SQLite, Database Design, Data Migration

Architecture: Event-Driven Architecture, Microservices, Distributed Systems, High Availability, Messaging Systems, RabbitMQ

Cloud & DevOps: AWS, Lambda, S3, Docker, CI/CD

Security & Engineering: JWT, OAuth2, OWASP Best Practices, Git, Clean Code, Code Standardization

PROFESSIONAL EXPERIENCE

Full Stack Developer — CXE Serviços de Assessoria e Tecnologia LTDA (Jan 2023 – Jan 2026)

- Designed and developed high-criticality financial systems, with a strong focus on scalability, availability, reliability, and data correctness.
- Developed and maintained backend services and RESTful APIs supporting critical business workflows and system integrations.
- Led the modernization of legacy platforms, including complete system rewrites and data migrations, achieving performance improvements of over 200%.
- Designed and implemented event-driven architectures using RabbitMQ and Redis for reliable communication between services.
- Worked on distributed systems and asynchronous processing patterns to improve system scalability and resilience.
- Optimized AWS infrastructure and application architecture, reducing operational costs by approximately 60%.
- Introduced CI/CD practices and code standardization, improving development workflows and reducing delivery time.
- Worked across backend, data, infrastructure, and frontend layers, taking ownership of features from implementation through deployment.
- Collaborated on systems where reliability and consistency of financial operations were critical to the business.

Front-End Developer Intern — CXE Serviços de Assessoria e Tecnologia LTDA (Jul 2021 – Dec 2022)

- Developed web interfaces with a strong focus on performance, usability, and user experience.
- Progressed into full-stack responsibilities, contributing to RESTful APIs and service integrations.
- Developed complete frontend applications using React and TypeScript.
- Implemented integrations through webhooks, connecting frontend workflows with backend services.
- Collaborated with design and backend teams to deliver consistent and functional applications.
- Participated in the evolution of internal applications and business workflows, gaining experience across the full software development lifecycle.

RELEVANT PROJECTS

Automated Trading System
- Developed trading bots focused on high availability and real-time execution.
- Used messaging and caching technologies such as RabbitMQ and Redis.
- Designed resilient architectures for mission-critical operations.

Legacy System Modernization
- Performed a complete rewrite using event-driven architecture.
- Managed data migration and achieved performance improvements exceeding 200%.
- Significantly reduced infrastructure costs.

EDUCATION

Associate Degree in Systems Analysis and Development (In Progress)
Unimar – University of Marília

Technical Degree in Information Technology
Universitário Escola Técnica – Porto Alegre
